Why Arent Video Games For Mac

They push simple work computers with extremely easy to use interfaces and rarely modifiable parts because they lost that fight a long time ago.. What you all don't realise in your apple elitism is they never have, nor ever will compete in the performance/gaming PC market.. While Iphones have definitely pushed brand recognition a lot higher, the people (you all) who are now buying them because of that, don't know the past.
